January 2026 Release Changelog

For help upgrading to the latest version, contact your Cloudhouse Representative. The following table describes each component available to upgrade within this release of Cloudhouse Guardian (**Guardian**).

> 💡 **Tip:** For more information on the known issues currently present within Guardian, see **Known Issues**.

Release Date	Guardian Platform	Guardian Web	Linux Agent
22nd January 2026	V4	V3.62.0	V5.50.0

Guardian Web Application V3.62.0

New Features

- Shallow Link Handling for Linux Directory Scans

- New Shallow Links checkbox in Scan Directories (Linux only; requires Agent V5.50.0).

- Records the symlink, target path, and target type without scanning destination contents.

- Reduces unnecessary recursion and improves clarity around symlink behaviour.

Other Enhancements

- **Search Approved Changes**

  - New Approval Comment search option in Change Report.

  - Enables filtering changes by text within approval comments.

- **View Full Node Name in Change Report**

  - Hover-to-preview tooltip now reveals full node names previously truncated in the table.

- **Updated Ignored Items Section (Node Groups)**

    - New, improved JSON format for editing ignored items.

    - Editing behavior differs based on UI skin:

        - Old Skin: JSON available via Edit.

        - New Monitored Skin: JSON shown automatically.

    - Feature requires activation via Cloudhouse Representative.

- **Change Report Improvements**

    - Automatic redirect to Sign-in after timeouts (no more error messages).

    - Approval Comment field now clears automatically.

    - Approval Reasons list sorted alphabetically.

    - Exports (PDF/CSV) now include approval comments.

- **Improved Accuracy for Windows Scheduled Task Changes**

    - Actions field now only shows changes when the Actions configuration is actually modified.

Fixed Issues

- **GWB-6420 – Unignore Changes Inconsistency**

    - Unignore action now updates all node groups correctly when a node belongs to multiple groups.

- **GWB-6274 – Preprocessor Entries Persisting Across Node Groups**

    - Preprocessor entries no longer appear incorrectly when switching between node groups.

    - Applies to systems using the **New Monitored Skin**.

- **GWB-6424 – Change Report Search Bar Fix**

    - Search bar now correctly processes:

    - Multiple comma-separated entries

    - Exclusions using hyphens (e.g., `-text`)

- **GWB-6430 – Missing Side-by-Side Diff for Script Scan Results**

    - Side-by-side diff now available for script scan output; previously only worked for file-type diffs.

Linux Agent V5.50.0

New Features

- **Shallow Link Handling for Directory Scans**

    - Records only the symlink, target path, and target type.

    - Prevents recursive scanning of destination files and directories.

Other Enhancements

None included in this release.

Fixed Issues

No issues fixed in this release.
