

# December 2025 Changelog

For help upgrading to the latest version, contact your Cludhouse Representative. The following table describes each component available to upgrade within this release of Cludhouse Guardian (**Guardian**).

**Tip:** For more information on the known issues currently present within Guardian, see [Known Issues](#).

| Release Date      | Guardian Platform | Guardian Web | Linux Agent |
|-------------------|-------------------|--------------|-------------|
| 4th December 2025 | V4                | V3.61.0      | V5.49.0     |

## Guardian Web Application V3.61.0

### New Features

- Bulk Approve Changes
  - Removed 50,000 record limit for bulk approvals in Change Report tab.
- Bulk Unignore Changes
  - Added “Unignore Changes” option in Approve Changes drop-down.
  - Allows restoring multiple ignored items in one action.

### Other Enhancements

- Freshservice Integration Improvements
  - Added new configuration fields:
    - Change Start Indicator
    - Change End Indicator

- Complete Status
- Close Status
- Filter by Change Indicator
  - Indicators in Change Report tab are now clickable for filtering.
  - Multiple indicators can be combined for refined views.
- Case-Insensitive Sorting
  - Lists and menus now sort alphabetically regardless of case.
- Change Report PDF Cover
  - Exported PDF cover page now displays applied filters.
- Cancel Date Range Changes
  - Ability to cancel date range selection without applying changes.
- Faster Change Approval
  - Improved performance for approving large volumes of changes.

## Fixed Issues

- GWB-6378 – Search filter now works across all levels of change record names.
- GWB-5244 – Dynamic node groups now correctly handle IP range arrays.
- GWB-6386 – Backslashes in variables for file scan options now properly escaped.
- GWB-6382 – Warning icon for Connection Manager Groups now displays correctly.
- GWB-6347 – Description field for approval reason is no longer mandatory.
- GWB-6384 – Expand/collapse logic fixed for multiple changes.

# **Linux Agent V5.49.0**

## **New Features**

- None.

## **Other Enhancements**

- `allow\_helper\_install` Behaviour
  - When set to 'false', Connection Manager can now use an existing remote helper even if it didn't install it.

## **Fixed Issues**

- None.
